Professional Summary

Am a Machine Learning Engineer with experience in designing and implementing machine learning models and systems to learn from and make decisions and predictions based on data. I have worked with tools such as Python, development environment -jupyter notebook and IDE's, Machine Learning Libraries, data manipulation and analysis tools and version controls.

Skills

Technical Skills

Python, machine learning algorithms, statistical analysis, data preprocessing and cleaning, data visualization, deep learning, version control.

Software Tools

Jupyter Notebooks, scikit-learn,

Projects

Natural Language Preprocessing with Disaster Tweets *Jan - Feb 2024*

- Built a machine learning model that predicts which tweets are about real disaster and which one aren't
- Trained the model on a dataset of labeled tweets using NLP techniques and supervised learning algorithm
- Preprocessed and cleaned the row data through tokenization, stemming and removal of stopwords.

Applied Data Science Lab at WorldQuant University *May- Sept 2023*

- Determine if real estate prices are influenced more by property size or location. Built data visualizations, and examined the relationship between two variables using correlation.
- Built an ARMA time-series model to predict particulate matter levels in Kenya. I extract data from a MongoDB database using pymongo, and improve model performance through hyperparameter tuning.
- Built a k-means model to cluster US consumers into groups. I used principal component analysis (PCA) for data visualization, and created an interactive dashboard with Plotly Dash.
- Created a GARCH time series model to predict asset volatility. I acquired stock data through an API, cleaned and stored it in a SQLite database, and built their own API to serve model predictions.

Education

Control and Instrumentation - Jomo Kenyatta University of Agriculture and Technology - Kenya - September 2018- December 2022
