Address: Nairobi, Kenya - 00100

Professional Summary

Junior Machine Learning Engineer able to train, test and maintain existing AI/ML models . Able to perform research with algorithms and data modeling techniques i.e NLP, computer vision. Experience in data cleaning and preprocessing, analysis and visualization of large datasets in Python. Versed with CI/CD process, using docker for containerization.

Skills

Technical Skills

Model training, Model evaluation, hyperparameter tuning, Data Preprocessing, Computer vision, Reinforcement Learning,

Software Tools

Python, Tensorflow, Matplotlib, Seabor, Numpy, Pandas, Spacy, IBM Watson Studio, Git, Github Actions, Docker, Kubernetes

Work Experience

Junior Machine Learning Engineer -

08/2023 - Current

Freelance - Nairobi, Kenya

- Data preparation: Used pandas and regex manipulation in python to clean and process data to ensure handling of missing values, outliers and normalization. Transform data into suitable formats for ML models.
- Trained and evaluated various classification models for a fraud detection system. Assisted in hyperparameter tuning and model selection, resulting in improved prediction accuracy.
- Utilized Matplotlib and Seaborn to uncover patterns, trends, and correlations in datasets, informing model development and feature selection.

Projects

House prediction prices

- A deep learning project using neural networks to train and evaluate models that can predict the price of houses.
- Experimented with regularization techniques - dropout and L1/L2 regularization techniques to combat overfitting in the neural network.
- Explored the available activation functions during training of the NN, that is the sigmoid function and ReLU activation function.

Education

Bachelors of Degree, Mathematics and Computer Science,
Kenyatta University- Nairobi, Kenya

3.89 GPA (Anticipated)

09/2020 - 06/2024

- Engaged in AWS Deepracer Student league for training autonomous vehicles using reinforcement learning. Created a model using reward function and performed hyperparameter tuning for efficient learning.
- Enrolled in IBM Data Science practitioner course in which I learnt data preparation, preprocessing and visualization using IBM Watson Studio software. Worked on an auto insurance claims project to detect fraud in customer claims using an ML model.

High School Diploma,

02/2016 - 11/2019

Lenana School - Nairobi, Kenya
