Address: Addis Ababa, Ethiopia

Professional Summary

I am an aspiring Data Engineer with MERN stack development background. Proficient in Python, SQL, and ETL processes. Eager to leverage full-stack experience for building scalable data pipelines and optimizing data infrastructure.

Skills

Technical Skills

Python, SQL, NoSQL, ETL processes, Hadoop, AWS, MERN stack, Flutter.

Software Tools

Github, Linux, Slack, Apache Kafka, Apache Hadoop,

Work Experience

Software Engineer - Zowi construction - Addis Ababa, Ethiopia - 15/1/2024- Present

- Responsible for managing implementation phase of an Intelligent Transportation Software System developed for Addis Ababa City Bus Authority. The system is a huge IOT based software used for smart bus dispatching and monitoring. My responsibilities are to manage the training and evaluation dispatcher to use the system effectively, Execute test plans to ensure reliability and performance, keep log and report of software defects, prepare manual and technical documentations, give the appropriate technical and business demonstration of the system as necessary. As of now I've successfully managed the pilot implementation phase on 3 routes.

Junior Software Engineer - Platform Technologies, - Addis Ababa, Ethiopia - 29/08/2023 - 12/1/2024

- Web dashboard planning, designing and prototype development using Flutter web, BLOC, Node/Express and MongoDB. The company has another service provider system that was on work, however it was very difficult to manage the clients and the revenue generated. I managed to design and develop a working prototype dashboard to effectively manage transaction and client management data, which resulted in positive impact on the company's sales and revenue.

Intern Front-end developer - RCNDC - <https://rcndc.com> - Addis Ababa, Ethiopia - 08/06/2022 - 08/08/2023

- Mobile application development, testing and maintenance using Flutter/Dart, GetX, GraphQL api. My responsibility was to add new features, fix bugs and refactor a mobile application code base. I was able to achieve a more cleaner, testable and maintainable code structure, which leads to minimized bugs and scaled by new features
- Front-End Web application development using React.js, Tailwind CSS and Redux library. I developed an e-commerce like website for a company, which was later customized a little and reused to develop similar platform.

Projects

Cache Superadmin Console

- An admin console for another service provider software application. It manages all data's associated with the clients of the main application, manage the transaction and revenue generated on the main app.

Hakime health service provider admin console

- Two admin consoles for a health service provider platform. They manages and visualize data's related to doctors, patients pharmacies, transactions, and advertisements of the main platform.
