

Data Scientist

YOHANES TESHOME KEBEDE

Phone: (+251)925315232 | Email: (johnteshe13@gmail.com)
Github: github.com/Yohanes213
Linkedin: linkedin.com/in/yohanes-teshome/
Address: Addis Ababa, Ethiopia

Professional Summary

I am an energetic and self-motivated Data Scientist with expertise in Computer Vision and Natural Language Processing. As a TensorFlow Certified developer, I bring a year of professional experience contributing to diverse projects. I am passionate about leveraging data to drive insights and innovation in real-world applications.

Skills

Technical Skills

Python (libraries: Pandas, NumPy, Scikit-learn, TensorFlow)
Machine Learning (Regression, Classification, Clustering, Deep Learning: Computer Vision, NLP)
Data Visualization (matplotlib, seaborn)
SQL, MongoDB

Software Tools

TensorFlow (Certified) , Power-BI, Other Tools (Git, Version Control Systems)

Work Experience

Data Scientist - Gebeya - Ethiopia (Addis Ababa) - March 2023 - Present

- Partnering with clients, I unlock hidden data insights to fuel business growth. My key contributions:
 - Bridged the gap between data and business, ensuring projects exceeded expectations.
 - Built strong relationships, consistently exceeding client expectations..

Machine Learning Engineer - Omdena - Kenya (Nairobi) - February 2023 - September 2023

- Spearheaded the end-to-end execution of projects, focusing on:
 - Predicting urban rental and Airbnb pricing in Kenya.
- Played a pivotal role in the data collection phase for Airbnb prices in Kenya, ensuring comprehensive and accurate datasets.
- Contributed significantly to a project centered on predictive modeling for urban growth in key African cities:
 - Took charge of data collection, pre-processing, and modeling phases, ensuring the project's success through meticulous attention to detail and expertise.

Data Scientist Intern - Hamoye - Nigeria (Lagos) - February 2023 - September 2023

- Led the development of a demand forecasting model for Brazilian logistic firms, utilizing their data to predict daily treatment order volume.
- Analyzed historical data and built a machine learning model to estimate the probability of conflict in African nations, contributing to conflict prevention efforts.

Projects

Project Title: Fabric-Defect-Detection

- The Fabric-Defect-Detection project focuses on real-time fabric defect segmentation using YOLOv8, a state-of-the-art object detection algorithm. By leveraging deep learning techniques, specifically YOLOv8, the project aims to accurately identify and segment defects in fabric images in real-time, allowing for efficient quality control processes in manufacturing settings. The implementation utilizes the power of convolutional neural networks to achieve high accuracy and speed in defect detection, ensuring timely and reliable identification of defects in fabric materials.
- Link to Project: [Fabric-Defect-Detection](#)

Education

Electrical Engineering - Addis Ababa Science and Technology University - Ethiopia - September 2017 – March 2020

- Accumulated 149 credits towards Electrical Engineering degree..
